DUAL ENROLLMENT COURSE LISTINGS

Fall 2025

EN 1101 English Composition I

This course involves the use of English for written communication, including exposition, analysis, and argumentation. Topics include grammar, proper sentence structure, paragraph development, word usage, and essay preparation.

- Identify grammar rules and other conventions
- Apply grammar rules to his/her own writing
- Apply the writing process to his/her own writing through drafting, revising and editing
- Apply elements of essay format to his/her writing
- Interpret texts (including visuals) and explain techniques used to communicate
- Apply documentation and formatting conventions of Turabian

EN 2103 Public Speech

This course introduces you to the principles and practices of effective oral communication, including selecting a speech topic, researching the topic, outlining and organizing the speech, using visual aids, analyzing and persuading an audience and critiquing our own speeches and those of others.

HI 2101 United States History I to 1865

This course covers the main themes of United States History through 1865. Students will acquire an overview of history from pre-Columbian societies through Reconstruction and have a foundational understanding of the social, political, economic, and cultural developments in this period. In addition to learning the chronology of the US in this period, students will learn to evaluate historical information and contextualize the main currents of US History. Thus, it will extend beyond the mere memorization of facts and dates. Students will critically analyze primary and secondary sources and learn to craft original historical claims supported by evidence.

MA 1600 College Algebra

This course offers a comprehensive introduction to the fundamental principles of college algebra. Emphasis is placed on the analytical study and solution of linear and quadratic equations and

inequalities, the manipulation and interpretation of polynomial, rational, and radical expressions, and the examination of functions, their properties, and graphs. The course is designed to develop algebraic proficiency and prepare students for advanced study in mathematics and related disciplines.

MA 1601 - Statistics

This course introduces students to the collection, analysis, and interpretation of statistical data. Students will learn various methods of sampling and reporting data, including calculation of means, proportions, distributions, and intervals. A particular emphasis of the course is to equip students to distinguish valid from invalid statistical claims.

NT 1200 New Testament Survey

This course introduces students to the New Testament as a foundational document of history, a significant text of literature, and a collection of divinely inspired writings. Through readings and analysis, students will explore the genres, structures, themes, and teachings of the twenty-seven New Testament books, as well as the historical and cultural contexts in which they were written. The course will also guide students to consider the lasting influence of the New Testament on various aspects of Western thought and culture, including law, politics, literature, art, music, ethics, and social values.

OT 1200 Old Testament Survey

This course introduces students to the Old Testament as a foundational document of history, a significant text of literature, and a collection of divinely inspired writings. Through readings and analysis, students will explore the genres, structures, themes, and teachings of the thirty-nine Old Testament books, as well as the historical and cultural contexts in which they were written. The course will also guide students to consider the lasting influence of the Old Testament on various aspects of Western thought and culture, including law, politics, literature, art, music, ethics, and social values.

PH 1901 Principles of Philosophy

This course is a study of the contributions, from antiquity to the 21st Century, from writers in Western philosophy. Topics include logic, reality, knowledge, science, ethics, freedom, beauty, God, and the mind.

PY 2703 Principles of Psychology

This is a scientific study of the major theories and concepts related to the study of psychology, including theories, applications, the use of special measurements, and research methods. Topics include human development, emotions, cognition, motivation, learning, perception, memory, personality, and behavior. The course also briefly addresses the integration of biblical counseling and psychology.

PS 1101 American Government

This course introduces students to the structures and institutions of American government, particularly the Constitution, three branches of government, system of checks and balances, and legislative process. The course will emphasize the rights and responsibilities of citizens – namely Christian citizens – to participate in government as members of a constitutional republic.

SC 1501 Physical Science

This course provides a broad, interdisciplinary introduction to the fundamental concepts of physical science, including physics, chemistry, astronomy, and Earth science. Designed for non-science majors, the course emphasizes scientific literacy and the role of the scientific method in exploring the natural world. Students will investigate the nature of matter and energy, atomic structure, chemical reactions, and the laws of motion. The course also explores the structure and behavior of Earth's systems and the universe, including plate tectonics, weather patterns, and celestial mechanics. Through observation, analysis, and practical application, students will develop an appreciation for how scientific principles influence every-day life and shape our understanding of the physical universe.
